Cleantech for air and water treatment

UV-Technik Speziallampen GmbH will be presenting innovative products and specific solutions for water disinfection at the IFAT Entsorga 2018.

For more than 25 years UV-Technik Speziallampen GmbH has been manufacturing and distributing UV lamps, electronic ballasts, UV sensors and other UV components for water and air disinfection. These decades of experience and future-oriented products make the company an internationally recognized market leader in this area, especially when it comes to innovative solutions with customized designs.

At the IFAT Entsorga, UV-Technik Speziallampen GmbH presents its large selection of tailor-made products that set new standards in highly automated systems worldwide.

The focus this time is on **UV system components for wastewater treatment.**

New are the electronic ballasts of the EPS, MLC and EPSA series with a specially developed controller. They not only provide optimal control and monitor UV system performance, but also perform an extremely gentle operation of the UV lamps.

Another trade fair highlight: Explosion-proof ATEX-IIC sensors and digital sensors for monitoring UV output and process temperature.

We are happy to advise you about the wide range of our UV system components for your individual applications.

Visit us at the IFAT Entsorga, Hall A3, Stand 146.
